Vaccine Facts

Vaccines work with the body's natural defences to develop protection against a disease. COVID-19 vaccines provide instructions to your body's immune system to recognize and fight off the virus that causes COVID-19.

Vaccines Work

Scientific and medical evidence show that vaccination can help protect you against COVID-19. Studies are also showing that vaccinated people may have less severe illness if they do become ill from COVID-19.

Vaccines Are Safe

Only vaccines that are proven to be safe, effective and of high quality are authorized for use in Canada. The COVID-19 vaccines have been rigorously tested during their development and then carefully reviewed by Health Canada.

Continue following public health measures

COVID-19 vaccines are important tools to help us stop this pandemic. Right now, we still need to follow public health measures to reduce the spread of COVID-19 and save lives. Federal, provincial and territorial governments will continue to assess the risk of COVID-19 spread in communities. Measures will be adjusted over time as more people are vaccinated, and we learn more about the science. Everyone is looking forward to a future when we can be together. Until then, we need to protect each other, especially those who are still vulnerable to severe disease from COVID-19. Get the facts.
